Oracle vs verifier-greedy T-gate saving
500 random mixed circuits, 5-12 blocks
y = x (greedy exactly optimal)
greedy optimal: 482/500 (96.4%)
greedy suboptimal: 18 (worst short 60 T)
42 T short
60 T short
aggregate capture : 98.37% of oracle T-saving
exactly optimal : 96.4% (482/500)
mean shortfall : 0.558 T (max 60)
fit : y = 0.9301x +1.8363
R^2 (fit) : 0.9318
R^2 (vs y = x) : 0.9251
Greedy saving (verifier-in-the-loop), T gates
Oracle saving (exhaustive 2^N search), T gates
