Hadamard-interference cliff in the safe T-count budget
cliff: 952.2 -> 59.1 T (16.1x drop)
T gates saved per circuit (symlog scale)
All-relative mask safe rate (%)
Inter-block Hadamard density h_prob
Verifier greedy
One-shot (plain fallback; zero for h_prob >= 0.1)
All-relative mask safe rate (%)
data: mean +/- std over 10 circuits per point
